

Aim 3 To Create a web Page using HTML Tags

HTML is an acronym which stands for Hyper Text Markup language which is used for creating web pages and web application.

Some basic HTML Tags :-

1) ~~<html>~~

<html> :

This tag informs the browser that it is an HTML document. Text between <html> tag describes the web document.

2) <head> :

It should be the first element inside the <html> element which contains the information about the ~~class~~ document. It must be closed before the body tag opens.

3) <title> :

As its name suggested, it is used to add title of that HTML page which appears at the top of the ~~to~~ browser window. It must be placed inside the head tag and should close immediately.

4) <body> :

Text between body tag describes the

Teacher's Signature : _____

Body content of the page that is visible to the end user. This tag contains the main content of the HTML document.
